Profile:

With a strong foundation in web technologies, I am an adaptable Full Stack Developer who excels in transforming complex ideas into elegant, functional, and user-centric digital ecosystems. Throughout my career journey, I have consistently demonstrated the ability to deliver projects on time, maintaining a keen focus on efficiency, and crafting effective business solutions for my clients. I am unwavering in my commitment to delivering projects of the highest quality.

Summary:

I am a seasoned software developer with a diverse skill set encompassing a range of technologies and tools. With over the years of professional experience in Software Development and Design, I have honed my proficiency in various domains. Here's a breakdown of my key technology skills:

- Dedicated **React.js, Node.js, and Express.js** developer with experience delivering elegant, high-performance solutions for complex technical challenges.
- Played a key role in developing dynamic and responsive user interfaces using React.js and JavaScript, improving overall application performance and user engagement.
- Experienced in building scalable and efficient backend systems using **Node.js and Express.js**.
- Hands-on experience working with databases such as MongoDB, Firebase, and SQL, ensuring optimized data management and efficient data retrieval.
- Possess a strong understanding of **HTML5 and CSS3**, enabling the development of accessible and well-structured web applications.
- Implemented **React Functional Components and Hooks** to enhance application functionality, maintainability, and performance.
- Utilized Redux for effective state management, ensuring predictable and centralized data flow across applications.
- Developed reusable React components to deliver consistent and optimized user experiences across various devices and screen sizes.
- Proficient with tools such as Postman and SQL Developer for API testing, database management, and application monitoring.
- Experienced in RESTful API development for building responsive and data-driven web applications.
- Familiar with Agile methodologies and version control systems such as Git.
- Skilled in using Visual Studio Code (VS Code) for efficient development, debugging, and code management.

Education

Bachelor of Engineering in Computer Science and Engineering,
Sri Ramakrishna Institute of Technology, Coimbatore.

Employment History

Oct 2021 - April-2024

Junior Development Engineer

Vaken Technologies,
Trichy

April-2024 - Jan-2026

Junior Development Engineer

Vanenburg Software
CBE

Jan-2026 - Till Now

Solution Engineer

Vanenburg Software
CBE

Technical Proficiencies

Programming Languages	Javascript, ES6, TypeScript,java
Markup Languages	HTML5, CSS
Frameworks	Node js , Express JS
Library	ReactJS, Redux, ReduxTool-Kit,
IDE tools	VS Code,
Web Technologies	Restful Web Services
Protocols	HTTP,HTTPS
Databases	MySQL, Firebase.Mongo DB
Build Automation	Maven
SDLC	Agile
Version Control	Github
Other Tools	Postman

Professional Experience

Project Name	: BitKey Homehub	April-2021 – April-2024
Employer	: Vaken Technologies Private Limited.	
Location	: Trichy,India	
Role	: Junior Development Engineer	

Product Development :

- Developed a high standard and user-friendly dynamic Reservation Application.

Responsibilities :

- Developed responsive user interfaces for Smart Lock Device Screens with React.js and Java.
- Implemented CRUD operations and streamlining the insertion of new buildings and properties within the admin portal.
- Collaborated with UI designers to create responsive and user-friendly interfaces.
- Utilized RESTful APIs to optimize data retrieval, enhancing performance by 30%.
- Participated in code reviews, ensuring code quality and readability.

Environment :

Java, SpringBoot, Microservices, React, Redux, MySQL, Firebase.

Project Name	: Valeo SCM	April-2024– Dec-2024
Employer	: Rappit - (Vanenburg Software)	
Location	:CBE,India	
Role	: Software Developer - Full stack	

Product Development :

- Developed a high-standard and user-friendly Sales Contract Document Management System (SCM). SCM is a governance and productivity tool that transforms scattered document storage into a structured, compliant, and risk-aware digital workspace for organizations.

Responsibilities :

- Developed responsive and dynamic user interfaces for the application using React.js and Java.
- Implemented CRUD operations and created new pages to manage, organize, and share documents across the organization.
- Integrated Google Drive Document Picker to enable users to select, share folders and files similar to Google Drive functionality.
- Worked extensively on frontend authentication, date pickers, and UI design to ensure a seamless user experience.
- Utilized Google-provided APIs to support document selection and sharing capabilities.
- Leveraged RESTful APIs in list and detail pages to optimize data retrieval and improve application performance
- Participated in regular code reviews, ensuring high code quality, maintainability, and readability.

Environment :

- React, Redux, Nodejs, Express, Firebase

Project Name	: Valeo VIM-HSE	Dec-2024– Sep-2025
Employer	: Rappit - (Vanenburg Software)	
Location	: CBE, India	
Role	: Software Developer - Full stack	

Product Development :

- Developed a centralized VIM-HSE Incident Management Application for Valeo (Automotive Industry) to streamline the recording, tracking, and resolution of Health, Safety, and Environment (HSE) incidents. The application ensures regulatory compliance and supports a safe working environment by enabling effective incident reporting, analysis, and mitigation across multiple modules.

Responsibilities :

- Participated in requirement discussion meetings, customer interactions, and contributed to database design.
- Designed and developed frontend screens for all Master Data modules, ensuring consistency across Incident Safety, Incident Environment, and Occupational Disease modules.
- Implemented detail page workflows for incident reporting and tracking across all modules.
- Developed and maintained approximately 5 dashboard screens to provide real-time insights and incident analytics.
- Implemented major detail pages for all modules along with print functionality using the HTML-to-PDF library.

- Developed backend CRUD operations for master data and application screens using RESTful services.
- Actively participated in code reviews and served as a core team member, reviewing other frontend developers' code and acting as a Frontend Lead.
- Involved in sprint planning, UAT support, and ensured successful on-time delivery of the application.

Environment :

- React, Redux, Nodejs, Express, Mongo DB, REST APIs, HTML-to-PDF Library.

Project Name	: Valeo WINGS	Sep-2025– Till-Date
Employer	: Rappit - (Vanenburg Software)	
Location	: CBE, India	
Role	: Software Developer – Frontend	

Product Development :

- Worked on the WINGS (Warranty Incidents Getting Solved) web-based application for Valeo, a global automotive supplier headquartered in France.
- The application supports the upload and analysis of warranty claims and part returns from multiple OEMs, enabling Field Early Warning detection and parts failure analysis to identify failures at an early stage.

Responsibilities :

- Implemented new change requests and enhancements based on evolving customer requirements for an existing application.
- Fixed UI and functional bugs, ensuring application stability and improved user experience.
- Worked on frontend modifications from scratch for newly requested features within the existing system.
- Collaborated with business stakeholders and backend teams to understand requirements and deliver timely solutions.
- Integrated frontend changes with RESTful APIs and validated data flow across modules.
- Participated in code reviews, ensuring quality, maintainability, and adherence to project standards.

Environment :

- React, Redux, Nodejs, Express, Mongo DB, REST APIs, HTML-to-PDF Library
